

Entrepreneurship education is a powerful tool to lift individuals, their families, and communities out of poverty. Dr. John Dobson developed award-winning courses at Harvard University that he now offers to underserved communities around the world. The courses apply evidence-based approaches that help entrepreneurs develop often vague ideas into viable business opportunities.

DYME's creativity and innovation learning curriculum leads to improved development outcomes because its problem-based approach increases comfort with the inherent uncertainty of the entrepreneurial process.

The courses provide entrepreneurial and technical assistance to nascent entrepreneurs. Developing their soft skills, creativity, and innovation as well as the hard skills of leadership, sales, marketing, accounting, and finance.

All courses use the DYME methodology that has been shown to increase both the rate of venture start-ups and the success rate of new businesses. Each assignment focuses on developing and testing their hypothesis in the market. The program uses the Virtuous Cycle of Entrepreneurship (VCE) which takes students through entrepreneurial sprints.

The five step VCE creates the structure that underpins the ToC, enabling learning through concrete actions. The five steps are, 1. Idea 2. Action 3. Outcome 4. Discussion/Reflection and 5. Self-Efficacy.

Venture Start-Up	Entrepreneurs by definition have the ability to function with uncertainty. This course is intended to provide a solid foundation of entrepreneurship and the entrepreneurial process. Successful entrepreneurship begins with an idea. In this course students develop their ideas through the 10-step DYME model into a viable business opportunity. The course was developed based on research on how entrepreneurs learn to become entrepreneurs. It is an action-learning course that incorporates behaviours of successful entrepreneurs. Through a series of entrepreneurial sprints students learn how to develop and test their hypothesis to launch a successful business.
Venture Growth	This course is designed to help existing business owners grow their businesses by identifying and fixing 'sticky problems' that are preventing the organization from maximizing its effectiveness and efficiency. This course will include seven tools developed by Dr. Dobson for his award-winning course at Harvard University. This course focuses on leader's ability to create a climate that fosters creativity and innovation. Students will develop then test their ideas in a real-world business setting and over a series of sprints they will they will improve organisational performance.
Food Truck Practicum	This course allows students to learn about entrepreneurship by starting and running their own food truck business. First, students will learn about steps of starting and run a successful business. Second, they will have entrepreneurial agency and autonomy to develop the business as they want. Finally, they will develop partnership within the community. The course can be conceptualized as a Venn diagram of small business management, entrepreneurship, and community engagement. It was designed to drive community engagement by providing students opportunities to engage with local community.

Courses are provided in Spanish, English, Portuguese, & Haitian Creole
